Art Unit: 2193

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "second rotator" in claim 11 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

It is noted that the specification, page 52, lines 11 & 23, discloses "second rotator" 1310; however, Fig. 13 does not show the feature.

2. Claims 1-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As per independent claim 1, the claim language is vague and indefinite. For instance, although the preamble of independent claim 1 claim a "high speed **add rotate** **add** system"; the claimed result is a "summation of the **first, second and third inputs**". Is the result equivalent to add shift add as result of circuit in Fig. 12?

Clarification is requested.

As per dependent claim 11, the drawings do not show the "second rotator".

As per dependent claim 14 and 20, the periods "." at the end are missing.

As per independent claim 21, the claim language is vague and indefinite. For instance, although the preamble of independent claim 21 claim a "method of performing a fast **add rotate add** operation", the claims fails to recite the necessary steps to

Art Unit: 2193

perform the recited function(s) nor are there any recitation describing how such a step is actually provided in the method. Sufficient detail step(s) must be recited to adequately describe and constitute the proposed method. The claim is incomplete in that it recites only a portion of the methodology required for the method to become operational, i.e., it omits essential elements and/or steps. See MPEP 2172.01. It is noted that final step "adjusting the carry" is NOT the result of **"add rotate add operation"**.

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 21-22 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The claims recite a method for performing a mathematical function.

"[t]o satisfy section 101 requirements, the claim must be for a practical application of the Sec. 101 judicial exception, which can be identified in various ways:

- . The claimed invention "transforms" an article or physical object to a different state or thing.
- . The claimed invention otherwise produces a useful, concrete and tangible result,...".

See "Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility" OG Date: 22 November 2005.

Since there is no physical transform to establish a practical application, a useful, concrete and tangible result appear to be lacking. Therefore, claims 21-22 are clearly directed to a non-statutory process.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cited references are art of interest.

6. The following is an examiner's statement of reasons for allowance: the recorded references do NOT teach or suggest the apparatus / method for performing **add rotate add operations** using an equivalent **single operation** as recited in independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
